

Upload Full Text

If a study meets your eligibility requirements, retrieve the full text PDF, and then select include.

If the study is free, you can **immediately** retrieve it with 1-click; otherwise, you or a teammate must find the study and upload the PDF.

Step 1. Toggle from Abstract View to Full Text View.

The screenshot shows a study titled "Never smile at a crocodile: betting on electronic gaming machines is intensified by reptile-induced arousal." by Rockloff, 2010. The interface has tabs for "Abstract", "Full Text", "Supplements", and "PubMed". The "Full Text" tab is highlighted with a red box. Below the title, there is a text area with the abstract content. At the bottom of the abstract, there are filters for "Population/Problem", "Intervention", "Outcome", and "User Keywords". Below these filters are dropdown menus for "Keywords" and "Bibliographic fields", and an "Edit" button. On the right side, there is a sidebar with sections for "Screening", "Tagging", and "Comments (0)". The "Screening" section includes a "Full Text Review" checkbox, an "Upload a File" button, an "Exclusion Reason" dropdown, and "Include", "Exclude", and "Include" buttons. The "Tagging" section includes a "Select Tag" dropdown, an "Enter Text" input field, and an "Apply Tag" button.

Step 2. Retrieve Full Text

Option A. One-Click Upload through Unpaywall

To upload the full text, click on "Import." This enables you to automatically retrieve any full text article that is NOT behind a paywall.

Abstract Tourists at the Koorana Saltwater Crocodile Farm in Coowonga, Queensland, Australia, including 62 males and 41 females, aged 18–66 ($M = 34.2$, $SD = 13.3$), were randomly assigned to play a laptop-simulated Electronic Gaming Machine (EGM) either: (1) prior to entry, or (2) after having held a 1-m saltwater-crocodile. Gambling behavior; including bet-size, speed of betting, final payouts and trials played on the EGM; was investigated with respect to participants' assigned arousal condition, problem-gambling status, and affective state. At-risk gamblers with *few* self-reported negative emotions placed *higher* average bets at the EGM after having held the crocodile when compared to the control. In contrast, at-risk gamblers with *many* self-reported negative emotions placed *lower* average bets at the EGM after having held the crocodile. The results suggest that high arousal can intensify gambling in at-risk players, but only if this feeling state is not perceived as a negative emotion.
