

Bibliomine

Bibliomining, or citation mining, refers to the act of identifying relevant studies by reviewing the citation list of a study with high relevance to your research question.

1. Navigate to Other Sources

The screenshot shows the Bibliomine interface for a project titled "Home: Acute Ischemic Stroke - RCTs". On the left sidebar, the "Literature Search" section is active, and the "Other Sources" option is highlighted with a red box. The main content area displays a "Research Question" and "Background" section. The "Research Question" is "Create clinical guidelines for treatment of Acute Ischemic Stroke based on current literature." The "Background" section contains text about intravenous alteplase and mechanical thrombectomy, with several hyperlinks. Below the background, there is a "Search Strategy" section. At the top of the main content area, there are tabs for "Show Table of Contents", "Protocol", "Description", and "Materials".

2. Switch to the biblio-mine tab

The screenshot shows the Bibliomine interface with a table of references. At the top, there are two tabs: "Add Individual References" and "Bibliomine", with the "Bibliomine" tab highlighted by a red box. Below the tabs is a table with the following data:

Title	Author	Source	Date Added	Added By	
Effectiveness and cost of olanza...	Robert Ro...	JAMA	1/21/2022	Kathryn Cowie	<input type="button" value="X"/>

3. Upload file

Upload a PDF with the study to be biblio-mined. Generally, you should biblio-mine from existing

Bibliomine

Upload an article
Its bibliography will be automatically mined and complete bibliographic data will be retrieved from PubMed and CrossRef. You may then select and promote the mined references for import into your nest.

Upload a .pdf

Systematic Reviews and Meta-Analyses.

It may take a few minutes to run.

4. View and Edit References

View the references pulled from the uploaded study.

Bibliomined Studies			
Title	Author	Link	Delete
Comparative efficacy and tolerability of 15 antipsychotic drugs in schizophrenia: a multiple-treatments meta-analysis.	Leucht, Stefan	PubMed: 23810019	<input type="button" value="X"/>
Aripiprazole versus placebo for schizophrenia.	Belgamwar, Ravindra B	PubMed: 21833956	<input type="button" value="X"/>
Checking consistency in mixed treatment comparison meta-analysis.	Dias, S	PubMed: 20213715	<input type="button" value="X"/>
A randomized, double-blind, placebo-controlled, study of the efficacy and safety of aripiprazole 10, 15 or 20 mg/day for the treatment of patients with acute exacerbations of schizophrenia.	McEvoy, Joseph P	PubMed: 17631314	<input type="button" value="X"/>
The efficacy and safety of lower doses of aripiprazole for the treatment of patients with acute exacerbation of schizophrenia.	Cutler, Andrew J	PubMed: 16946694	<input type="button" value="X"/>
Efficacy and safety of aripiprazole and haloperidol versus placebo in patients with schizophrenia and schizoaffective disorder.	Kane, John M	PubMed: 12363115	<input type="button" value="X"/>
The positive and negative syndrome scale (PANSS) for schizophrenia.	Kay, S R	PubMed: 3616518	<input type="button" value="X"/>
Comparative effects of 18 antipsychotics on metabolic function in patients with schizophrenia, predictors of metabolic dysregulation, and association with psychopathology: a systematic review and network meta-analysis.	Pillinger, Toby	PubMed: 31860457	<input type="button" value="X"/>
Automating network meta-analysis.	van Valkenhoef, Gert	PubMed: 26053422	<input type="button" value="X"/>

For any reference that is incomplete or incorrectly recognized in the underlying PDF, select the “x” to delete. You can still add any of these references [manually](#), but ensure that you have removed any incorrect citation information before selecting “Send to Screening.”

Send to Screening

When you have finished viewing and editing the references from a PDF, select “Send to Screening” from the main Biblio-mine page to queue all studies for [Screening](#). **This step is irreversible**, so do not press Send to Screening until you have finalized the references you would like to import!

Q. What if the uploaded Systematic Review reports the included trials in a supplementary appendix or a table only? A. The biblio-mining tool depends on being able to recognize a consistent format for references in the uploaded article's bibliography. Materials found only in tables or supplementary resources will not be identified, and formats not supported by the biblio-mining tool may need to be manually removed before finalizing your list of studies to be queued.
