Create a new Nest

A Nest® is the Nested Knowledge term for an updatable, collaborative review project. Be sure to look over our list of [Key Definitions in Nested Knowledge](#) before you launch yourself in! As a first-time user, you have the option to create a new nest that is guided or a standard demo nest:

JT

Welcome to Nested Knowledge

Do you have a research question ready to do a Literature Search in the software? This is the first step to creating a living review.

If not, check out one of our demonstration nests from previously published reviews. They are partially complete to give you an idea of what a nest looks like.

Each demo has a corresponding wiki page to walk you through the nest yourself. All demos are copies you own (don't worry about breaking anything!) and are accessed in AutoLit.

Create Your First Nest

Create a New Nest (Guided)

Demonstration Nests

Nest	
COVID-19: Antivirals	Start Demo
Osteoarthritis: Tanezumab	Start Demo
Heart Failure: ACE Inhibitors & ARBs	Start Demo

After creating your first nest, anytime you return to the [AutoLit Home](#) page, it will list all nests to which you have access and you can create a new nest on the left hand side:

Practice in a Demo

If you would prefer to practice in a nearly-complete project to guide you on nest building, you can see how [here](#).

Name your Nest

You can choose any name for your nest, but we recommend noting a subset of: the Population, Disease, Intervention(s), interested parties, and/or other unique identifier(s).

Name Your Nest

Give your nest a name (you can always change it later):

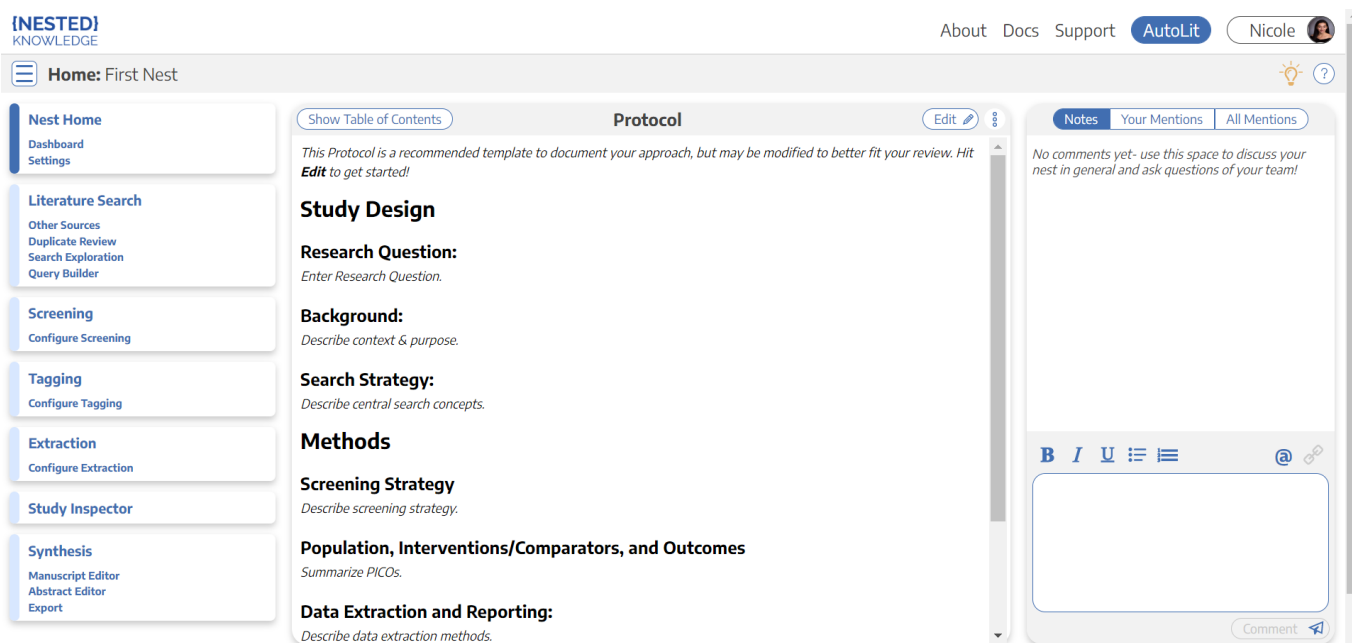

Intervention for Disease State, Research Group

Cancel

Create

Create Your First Nest

At the free tier, you can create one demo nest or one non-demo nest. When you create your first non-demo nest, you will be placed in the Literature Search page of an empty nest:

Here, you have several options and resources accessible to you:

Add a Protocol

In the Nest Home module, you can add a protocol by clicking “Edit” in the Protocol section in the main screen.

Add a Literature Search

Your nest will not have any records until you add a [Search](#), [Import studies in bulk](#), [Add studies individually](#), or [Bibliomine](#) an existing paper.

Optional: Search Exploration

If you are unsure on how to build a query, but have a review topic in mind, you can use [Search Exploration](#). There, you can enter any concepts of interest and expand on your initial ideas based on AI recommendations of additional terms and review of candidate studies. It also automatically generates a query that you can use directly to build your search in the nest.

Jobs and Documentation

The icons in the top right corner are there to provide you with progress updates and guidance.

- **Horizontal Bars icon:** shows you the progress of jobs working in the background
 - Here you can view all active, completed, and failed Jobs (such as recurring searches, PDF import, etc.) that are running in the background in your nest.

In some cases, such as running searches in Literature Search or Search Exploration, an active job will restrict new activities, such as adding a new search while that Job is active.

Click "View Jobs" to view active, completed, and failed Jobs.

- **Question Mark:** links out to the relevant Documentation page to provide guidance for the particular page you are on.

These icons are available on every page in your nest, sometimes split between with a progress bar depending on the module.

Next Steps

Not sure what to do next? Check your [Nest Settings](#) to ensure you have configured your research project to your preferences. Then, if you have added a [Literature Search](#), move on to [Screening studies](#)!

Start a Free Pilot

Explored all there is to offer at the free tier level? You're welcome to start a free academic or business-level pilot for 30 days to access full functionality of the software, no strings attached, just to see if it's for you. [See here for instructions.](#)
