Exporting Custom Tables and CER Materials

If you'd like to export contents from your nest, you can use the Export page or Downloading from Inspector.

NOTE: Most Export functions have **moved to Inspector**.

Specifically, **all functions** except (1) the Custom Table Builder and (2) the CER Builder are now available under the "Download" button on Inspector.

Use this Export page for:

- Custom Table Export and
- CER Builder.

Use Download from Inspector for:

- Study metadata (CSV or RIS Files)
- Screening decisions
- Tags & Tag Contents
- Extracted Data
- Critical Appraisal
- All Full Text PDFs

Custom Table Export

Custom tables enable you to choose which bibliographic data, tags, and data elements you would like to export. Use this option if:

- 1. You want to choose the table type between tables of Study-level data, Study-Arm-level data, or Intervention-level data (i.e., in order to choose what the rows represent).
- 2. You want to filter to only a subset of the studies in your nest.
- 3. You are seeking to define exactly which columns should be presented.

Throughout the Custom Table build, the page presents a Preview; **use this Preview to understand the structure that your exported table will have after you are finished!**

1. Navigate to Export

Under Synthesis, click "Export"

Last update: 2023/06/07 wiki:autolit:extraction:export https://wiki.nested-knowledge.com/doku.php?id=wiki:autolit:extraction:export&rev=1686096212 00:03

Study Inspector				

It should already be opened to Custom Tables; if you navigate away, click the "Custom Tables" toggle to return to this page.

2. Choose Type of Table

Click on the drop-down menu under "Table of" in order to choose whether you would like a table showing elements from the study as a whole, the various study arms in each study (placebo, intervention groups, etc.), or across all interventions.

	Custom Tables CER Builder Extracted Data RoB	
Generate tables describing included records in this nest. You must define the type of table (what the rows are) and a corresponding set of columns	is. Optionally supply filters to limit which rows are displayed.

Title	First Author	Year
Trial of Endovascular Treatment of Acute Basilar-Artery Occlusion		1970
Trial of Thrombectomy 6 to 24 Hours after Stroke Due to Basilar-Artery Occlusion		1970
Endovascular Therapy for Stroke Due to Basilar-Artery Occlusion.	Langezaal, Lucianne C M	2021
Endovascular treatment versus standard medical treatment for vertebrobasilar artery occlusion (BE	Liu, Xinfeng	2020

Note that if you want to be able to export/download any extracted data--to create tables for a manuscript, for example--you must select Table of "Study Arm."

Table of Studies

Export a Table of Studies if you want one row per study, and **only if you do not plan to export Data Elements**. This is because the only Data Element that is scoped to the Study (rather than Study Arm) is total Study Size.

To choose a Table of Studies, select "Study" in the drop-down, and proceed to Filters and Adding Columns. You will be able to choose among Bibliographic data, Tag data, or Study Size. This will create a table where each row (red box) represents a single study and each header (red arrow) is either a bibliographic attribute or a tag:

		Previewing 1	0 of 19 rows		
Title	First Author	Year	Size	Medication	Inclusion window

Effect of Endovascular Con	Lapergue, Bertrand	2017	381		Up to 6 hours: clinicaltrials

Table of Study Arms

Export a Table of Study Arms if you want each arm in each study to have its own row. This is the most similar table type to the Export All Data option below.

This is the most common export type for completing statistical analysis, since it is the **only table type that can list the exact data elements from the underlying studies.** It will create a table where each row is an arm (so a study, as shown by the boxes, may be split into multiple rows), and can have bibliographic, tag, or data element columns (arrows):

		Pre	viewing 10 of 38 ro	ows		
Title	First Author	Year	Intervention	Medication	Arm Size 🧲	Mortality at 90D (n/N)
Endovascular thrombe	Khoury, Naim N	2017	Unknown MT	Number of Patients wi	40	11 / 40 (27.5%)
Endovascular thrombe	Khoury, Naim N	2017	Standard Care/Medical	Number of Patients wi	37	9 / 37 (24.3%)
Thrombectomy within	Jovin, Tudor G	2015	Stent-triever	Number of Patients wi	103	19 / 103 (18.4%)
Thrombectomy within	Jovin, Tudor G	2015	Standard Care/Medical	Number of Patients wi	103	16 / 103 (15.5%)
Stent-retriever thromb	Saver, Jeffrey L	2015	IVT alone	Number of Patients wi	98	12 / 97 (12.4%)
Stent-retriever thromb	Saver, Jeffrey L	2015	Stent-triever + IVT	Number of Patients wi	98	9 / 98 (9.2%)
Randomized assessme	Goyal, Mayank	2015	Standard Care/Medical	Eligible for IVT: Table 1,	150	28 / 147 (19.0%)
Randomized assessme	Goyal, Mayank	2015	Unknown MT	Eligible for IVT: Table 1,	165	17 / 165 (10.3%)
A randomized trial of i	Berkhemer, Olvert A	2015	Unknown MT	Number of Patients wi	233	44 / 233 (18.9%)
A randomized trial of i	Berkhemer, Olvert A	2015	IVT alone	Number of Patients wi	267	49 / 267 (18.4%)

Table of Interventions

Export a Table of Interventions if you want to summarize all data at the level of Interventions. This is the most similar table type to the initial Summary view of Quantitative Synthesis.

This table type will have each Intervention in a row, and the only options for rows will be summaries of the Data Elements for each Intervention:

Previewing 10 of 15 rows				
Intervention ⇒	Early Neurological Improvement (NIHSS) (Median, IQR)	Mortality at 90D (n/N)		
Interventions	12.0 [3.1, 13.8] (1596)	884/4876 18.1% [16.6%, 19.7%]		
Mechanical thrombectomy	12.0 [-1.4, 13.0] (779)	550/2862 19.2% [17.2%, 21.4%]		
Stent-triever	2.0 [2.0, 2.0] (103)	104/535 19.5% [16.3%, 23.1%]		
Aspiration		91/426 21.6% [17.6%, 26.3%]		
Combination therapy		69/293 23.3% [17.8%, 29.9%]		
Unknown MT	12.0 [3.8, 13.0] (676)	286/1608 17.3% [14.3%, 20.8%]		
Thrombolysis/Medical therapy	15.4 [10.4, 16.0] (370)	177/949 18.9% [16.5%, 21.5%]		
IVT alone	16.0 [16.0, 16.0] (267)	79/452 17.7% [14.4%, 21.5%]		
Standard Care/Medical Therapy	6.0 [6.0, 6.0] (103)	98/497 19.9% [16.6%, 23.7%]		

Table of Tags

Selecting Table of Tags is a specialized option; instead of exporting underlying study information, this exports your tagging hierarchy with basic information about the use of each tag.

If you select this option, you will export a table where each row is a tag, and you will additionally be able to note:

- The Tag Description
- The "Depth" of that tag, representing where it is in the hierarchy (0 = Root Tag, 1 = right below Root Tag, etc.)
- If that tag was configured as a Data Element
- The frequency of the use of that Exact Tag
- The Recursive Frequency of that tag, representing how commonly that tag OR any of its children were used

Previewing 10 of 97 rows						
Name	Description	Depth	Data Element	Exact Frequency	Recursive Frequency	
Patient Characteristics		0		0 / 19 (0.0%)	19 / 19 (100.0%)	
Timing		1		0 / 19 (0.0%)	15 / 19 (78.9%)	
Onset-to-alteplase		2	Continuous: Median (IQR)	11 / 19 (57.9%)	11 / 19 (57.9%)	
Admission-to-needle		2	Continuous: Median (IQR)	4 / 19 (21.1%)	4 / 19 (21.1%)	
Needle-to-puncture		2	Continuous: Median (IQR)	1 / 19 (5.3%)	1/19 (5.3%)	
Needle-to-recanalization		2	Continuous: Median	0 / 19 (0.0%)	0 / 19 (0.0%)	
Onset-to-groin puncture		2	Continuous: Median (IQR)	13 / 19 (68.4%)	13 / 19 (68.4%)	
Medication		1		0 / 19 (0.0%)	16 / 19 (84.2%)	
IVT after thrombectomy?		2	Dichotomous	0 / 19 (0.0%)	0 / 19 (0.0%)	
Tenecteplase (instead of alt		2	Dichotomous	0 / 19 (0.0%)	0 / 19 (0.0%)	

3. Filter (Optional)

If you want to export only the data from a subset of the studies in the nest, use the "Filter To" dropdown after selecting "Table of ...". This will work differently based on the Table Type you selected above:

- In Tables of Studies, you can filter to studies that have a Tag at or below a certain level.
- In **Tables of Study Arms**, you can filter to study arms that have a certain Intervention, a certain Data Element collected for them, or that have a specific Tag at or below a certain level on the corresponding study.
- In **Tables of Interventions**, you can filter to studies that have a specific Intervention.
- In **Tables of Tags**, you can filter to studies that have a Tag at or below a certain level.

4. Add Columns

Once you have selected the type of Table you are exporting and applied any relevant filters, you can customize what columns will be presented in your exported Table.

Depending on Table Type, you can select:

- **Bibliographic Data:** Name, Author, Year, PubMed ID, and/or a Link to the article, among others.
 - To add all citation information in one cell, select "Citation" from the Attribute drop-down.
- Tag: The tag names and tag text excerpts at or below a given tag.
- Intervention: The Intervention applied to an entire cohort or to a Study Arm.
- Study/Arm Size: The total number of patients in a Study or an Arm.
- **Data Element:** The exact quantitative data associated with a given Study Arm or cohort. Note: Categorical Data Elements cannot be exported in this table structure due to their large column sizes.

		Custom Tables CER Builder Extracted Data RoB	
Generate tables describing included r	ecords in this nest. You must define the type of table (what the rows are) and a corresponding set of colu	nns. Optionally supply filters to limit which rows are displayed.

CER-specific Exports

Nested Knowledge offers export of certain data required by the EU MDR 2.7.1 Rev 4 as part of the Clinical Evaluation Report submission process.

Accessing the CER Export page

To access the CER Export page, select Export from the AutoLit menu, and then in the resulting page, toggle to "CER Builder."

Exporting Documents and Data

In the CER Builder, you have the options of exporting your Literature Search or your Screening

activities.

1. Literature Search Export

To export a record of the Search Engines you used, alongside specific queries used, the number of total records returned, duplicates found and the number included and excluded from each search (as well as all studies that were added individually), select "Literature Search" from the drop-down.

Then, choose whether to export as a .docx or a .csv, and select "Download." See below for an example. Searches are listed in chronological order from top to bottom by when they were first ran in your nest. The duplicate column refers to the number of duplicates found in the corresponding search, compared to the studies already in the nest and therefore returned by previous searches.

Search	Database	Query	Date	Results	Duplicate	Excluded	Included
1	PubMed	basilar AND "ischemic stroke" AND (RCT OR "randomized controlled trial")	Jun 25, 2021	25	0	24	0
2	PubMed	"basilar artery occlusion" AND "randomized controlled trial"	Jun 25, 2021	16	7	8	1
3	PubMed	basilar AND (stent- triever OR aspiration OR thrombectomy) AND (IVT OR IV-tPA OR thrombolysis) AND stroke	Jun 25, 2021	244	14	227	0
4	Expert Recommendation		Jun 30, 2021	3	1	0	2
TOTAL				288	22	259	3

2. Screening Export

To export a record of all studies Screened in your nest, with full citation information and links to full texts, as well as the Screening status and (if excluded) the Exclusion Reason, select "Screening" from the drop-down.

Generate tables commonly included in Clinical Evaluation Reports (CERs).

CER Table Type		
	Screening	~
CSV docx		
CSV		

Then, choose whether to export as a .docx or a .csv, and select "Download." This will create a document that contains records such as:

Search	Reference	Include/Exclude
1	Kasner et al. Warfarin vs aspirin for symptomatic intracranial stenosis: subgroup analyses from WASID. <i>Neurology.</i> 2006. <u>Full</u> <u>text</u>	Excluded: Published Before 2014-01-01
1	Zhang et al. Prognosis of dolichoectasia in non-cardioembolic transient ischemic attack and minor stroke. <i>Neurol Res.</i> 2018. <u>Full</u> text	Excluded: Does not have an MT to thrombolysis comparison in basilar stroke
1	Campbell et al. Effect of Intravenous Tenecteplase Dose on Cerebral Reperfusion Before Thrombectomy in Patients With Large Vessel Occlusion Ischemic Stroke: The EXTEND-IA TNK Part 2 Randomized Clinical Trial. <i>JAMA</i> . 2020. <u>Full text</u>	Excluded: Does not relate to basilar AIS
1	Rozeman et al. Evolution of Intra-arterial Therapy for Acute Ischemic Stroke in The Netherlands: MR CLEAN Pretrial Experience. <i>J Stroke Cerebrovasc Dis.</i> 2016. Full text	Excluded: Does not have an MT to thrombolysis comparison in basilar stroke

Export All Data or Export RIS Files

These functions have been moved to Download from Inspector.
