

Search

Literature Search is the starting point for adding studies to your nest. In order to proceed to Screening records, you will need to add studies by Executing Searches, Importing RIS Files, or adding Other Sources.

Query	Search Engine	Schedule	Search Now	Details
("Therapeutics" OR "antiviral therapies") and "cough" and "cold"	PubMed	Never	RunFile	Run: 2022-12-21Results: 23More
(Lopinavir OR Ritonavir OR Remdesivir OR Ribavirin OR Arbidol OR Favipiravir OR Sofosbuvir OR Daclatasvir) ...	Embase	Never	File	Run: 2021-12-01Results: 25More
("Therapeutics" OR "antiviral therapies") AND (RCT OR "randomized controlled trial") AND (COVID-19 OR SAR-...	PubMed	Never	RunFile	Run: 2022-02-03Results: 61More

Literature Search contains the final records of your searches and imports. Also, from this module, you can:

- [Execute Searches](#) on several databases (PubMed, EuropePMC, ClinicalTrials.gov, and DOAJ) directly via [API](#).
- [Import RIS Files](#) containing study metadata from searches on other databases (e.g. Embase).
- Set an Update Schedule for API-based searches.

All records loaded into the nest are de-duplicated, meaning duplicates are automatically removed, and all available metadata is added alongside each record. You can view number of duplicate records removed in the top right corner “Duplicate Review (n)” and click to view the duplicates or access via “Duplicate Review” in the left-hand menu. In addition, we add a Ref ID to each record. This is a

number assigned to each record based on the order in which it was uploaded. Learn more about [Ref IDs](#).

Assistance in building a search

If you have already crafted your search strategy, you can add it directly to Literature Search (see above). However, if you would like assistance in building a Boolean query, where you can start from a set of terms of interest and iteratively build out your topics of interest, we also offer [Search Exploration](#), where you can add terms of interest and expand on your initial ideas based on AI recommendations of additional terms and review of candidate studies.

Adding Other Sources

In addition to API-based searches and RIS Import, we offer two methods for adding studies directly to a nest:

- [Adding Studies Individually](#) based on DOI, PMID, or manual entry of metadata, and
- [Bibliomining](#) the references from the PDFs of existing reviews or studies.

Editing and Reviewing References

We automatically import metadata and run a de-duplication algorithm to ensure we save only one version of each study. In order to check both the metadata and deduplication, you can use:

- [Duplicate Review](#): Examine and edit the outputs of our de-duplication algorithm.
- [Edit References](#): Edit the metadata of studies.
