

Bibliomine

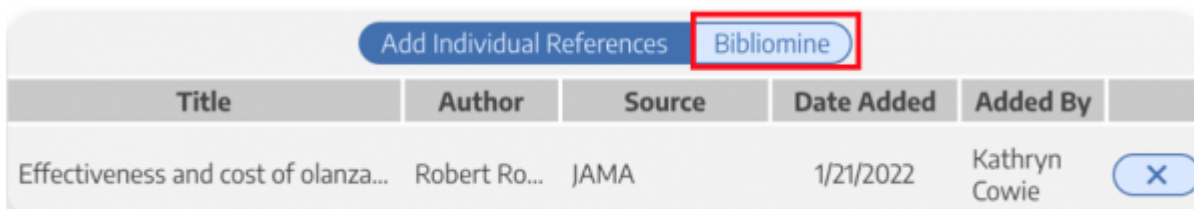

When you are performing your literature review, it is often useful to be able to quickly grab references from other papers on your subject of interest. Bibliomining, or citation mining, refers to the act of identifying relevant studies by reviewing and importing the citation list of a study with high relevance to your research question.

1. Navigate to Other Sources

The screenshot shows the Bibliomine interface for a project titled "Home: Acute Ischemic Stroke - RCTs". On the left sidebar, under the "Literature Search" section (which has a progress indicator of 2/2), the "Other Sources" option is highlighted with a red box. Other options in the sidebar include "Duplicate Review", "Search Exploration", and "Query Builder". The main content area on the right displays a "Research Question" and "Background" section, providing context for the study. The "Background" section includes a paragraph about intravenous alteplase and a link to a meta-analysis. The "Search Strategy" section describes the search process used to find relevant papers.

2. Switch to the biblio-mine tab

The screenshot shows the top navigation bar of the Bibliomine interface. The "Bibliomine" tab is highlighted with a red box, indicating it is the active view. The navigation bar also includes an "Add Individual References" button. Below the navigation bar, a table displays a list of references. The table has columns for Title, Author, Source, Date Added, and Added By. The first row shows a reference titled "Effectiveness and cost of olanza..." by Robert Ro... published in JAMA on 1/21/2022, added by Kathryn Cowie. A close button (X) is visible next to the reference.

Title	Author	Source	Date Added	Added By
Effectiveness and cost of olanza...	Robert Ro...	JAMA	1/21/2022	Kathryn Cowie

3. Upload file

Upload a PDF of the study containing the reference you want to bibliomine. Generally, you should bibliomine from existing Systematic Reviews and Meta-Analyses on your topic of interest. It may take

a few minutes to run.

At this point, **your records will still require review before being added to your nest!**

4. View Bibliomined References

When finished, your references will still Require Review! In this step, you should examine the bibliographic data (Title, author information, PMID/DOI if present); since this process involves pulling text from PDFs, there is a chance that the bibliographic data are incorrect.

Select the eye icon to view the references pulled from the uploaded study.

You can review the PDF of a previously bibliomed manuscript by clicking on the link in the file column of the bibliomine tab. A PDF of the bibliomined review will download automatically. This is helpful if you want to see the full text of a document someone else bibliomined!

5. Review Reference Information

Clicking the eye icon will open a page displaying title, abstract, PMID/DOI/link, and the option to delete records:

Bibliomined Studies			
Title	Author	Link	Delete
Comparative efficacy and tolerability of 15 antipsychotic drugs in schizophrenia: a multiple-treatments meta-analysis.	Leucht, Stefan	PubMed: 23810019	
Aripiprazole versus placebo for schizophrenia.	Belgamwar, Ravindra B	PubMed: 21833956	
Checking consistency in mixed treatment comparison meta-analysis.	Dias, S	PubMed: 20213715	
A randomized, double-blind, placebo-controlled, study of the efficacy and safety of aripiprazole 10, 15 or 20 mg/day for the treatment of patients with acute exacerbations of schizophrenia.	McEvoy, Joseph P	PubMed: 17631314	
The efficacy and safety of lower doses of aripiprazole for the treatment of patients with acute exacerbation of schizophrenia.	Cutler, Andrew J	PubMed: 16946694	
Efficacy and safety of aripiprazole and haloperidol versus placebo in patients with schizophrenia and schizoaffective disorder.	Kane, John M	PubMed: 12363115	
The positive and negative syndrome scale (PANSS) for schizophrenia.	Kay, S R	PubMed: 3616518	
Comparative effects of 18 antipsychotics on metabolic function in patients with schizophrenia, predictors of metabolic dysregulation, and association with psychopathology: a systematic review and network meta-analysis.	Pillinger, Toby	PubMed: 31860457	
Automating network meta-analysis.	van Valkenhoef, Gert	PubMed: 26053422	

For any reference that is incomplete or incorrectly recognized in the underlying PDF, select the “x” to delete. For example, if an incomplete title is saved or a blank row has been inserted (see example below), delete those references before sending to screening.

An adaptive randomized controlled trial of non-invasive respiratory strategies in acute respiratory failure patients with COVID-19	Perkins, GD	Google Scholar	
-epidemiological-update-on-	covid-	Google Scholar	
Mortality outcomes with hydroxychloroquine and chloroquine in COVID-19 from an international collaborative meta-analysis of randomized trials	Axfors, C	Google Scholar	
A randomized clinical trial of the efficacy and safety of interferon β -	Davoudi-Monfared, E	Google Scholar	

You can still add any of these references [manually](#), but ensure that you have removed any incorrect citation information before selecting “Send to Screening.”

Bibliographic Data

For records with a PMID or DOI, the bibliographic data will be automatically imported. Otherwise, you **will likely need to edit the record's bibliographic data during the Screening process**; we provide a Google Scholar link where possible to help you find the record, but the bibliographic data in AutoLit are based on what was reported in the underlying PDF.

Send to Screening

When you have finished viewing and editing the references from a PDF, select “Send to Screening”

from the main Biblio-mine page to queue all studies for **Screening**. **This step is irreversible**, so do not press Send to Screening until you have finalized the references you would like to import!

Q. What if the uploaded Systematic Review reports the included trials in a supplementary appendix or a table only?

A. The biblio-mining tool depends on being able to recognize a consistent format for references in the uploaded article's bibliography. Materials found only in tables or supplementary resources will not be identified, and formats not supported by the biblio-mining tool may need to be manually removed before finalizing your list of studies to be queued.
