

# Execute Literature Search

When the research question has been finalized, it's time to check the literature.

## 1. Select Nest

From the list on AutoLit, select your Nest.

Objective

Compare the efficacy of commonly used **ablation** catheters for the following therapeutic areas: Paroxysmal AF and Persistent AF (excluding long-standing Persistent AF, unless mix).

Scope

Any clinical in humans (randomized or non-randomized, comparative or uncontrolled, prospective or retrospective) that reported on one or more of the following ablation catheters of interest:

Focal

Contact force catheter with Surpoint Module

Diamond Temp

Farapulse (Aflera)

Veripulse

Single-shot

2nd-4th generation Arctic Front

Heliosar

Radiofrequency

TactiCath

FlexAbility

Heliosar

SmartPillate

Pentaray Nav

QDOT

Thermocool

Cryoablation

Arctic Front

You will be able to see any previous searches performed

## 4. Select Search Engine

From the drop-down, select the Search Engine or database you would like to set up automatic API-based search on. Nested Knowledge supports PubMed, EuropePMC, and ClinicalTrials.gov.

For any other search engine or database, you will need to import using [File Import](#) rather than running directly via API.

Each of these search engines use Boolean queries, so you can use AND, OR, NOT, and parentheses to connect different terms. For specific guidance on constructing queries, use the search-engine-specific-links here:

- [PubMed](#)
- [EuropePMC](#)
- [ClinicalTrials.gov](#)
- [Directory of Open Access Journals \(DOAJ\)](#)

## 5. Type in your Search Terms

Type your search terms into the “Query” box, type the same as you would in a search engine. **Use parentheses and terms such as AND, OR, NOT, in between your phrases. Click [HERE](#) for tips on how to create a great literature search.**

## 5. Select Search Engine & Schedule

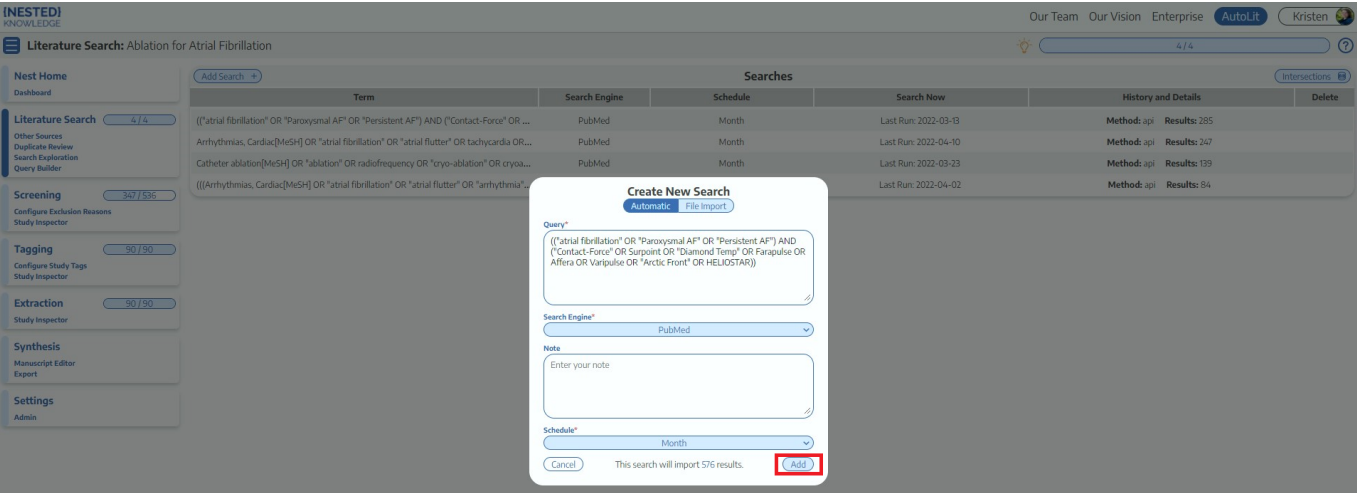

Below the “Query” box, there is a drop-down list of search engines you can choose from. A second

drop-down list is below, where you can choose to run the search only once or have it repeatedly run over time (ex: monthly, etc).

6.Run Your Search

Once you've completed entering all terms, chosen the search engine and schedule of running the search. Click “Add” in the bottom right corner of the window.

7. New Studies will be Added to Screening

Once you add the new search, it will run and be listed at the top of your searches. The added studies will be ready to be screened in the Nest menu.

## Next Steps

When you have confirmed that your final search(es) represent all records you would like to review in your nest, proceed to [Screening](#).

## Useful Information

- **Viewing Search History**
  - To see the full term that was searched on the search engine and the dates on which it was searched, as well as the number of studies retrieved, you can hover over a study and click “Full History”.

Literature Search: COVID-19 RCTs for Antivirals - Lauren

5/5

Below are all searches in the nest. Searches may be executed via API (depending on search engine) or RIS file upload.

- **Deletion Warning**
  - If you delete a search, you will delete all studies found through that search term, all screening, tagging, extraction data, and any live/updatable export from those studies. Do not delete a search unless you want to remove all results related to it.
- **No Editing**
  - To ensure a consistent search record, you cannot edit a search term once executed. You can delete it (see above warning) and replace it, but you cannot edit a search once it is added.
