

Execute Literature Search

When the research question has been finalized, it's time to check the literature.

1. Select Nest

From the list on AutoLit, select your Nest.

Review Title:

Database of Randomized Controlled Trials related to Acute Ischemic Stroke clinical guidelines: A report from a living systematic review and network meta-analysis through Nested Knowledge

Authors:

Author Name	Author Role	Author Affiliation
Gautam Adusumilli	Screened, tagged, and extracted most of the data	MGH
Jeremy Heit	Wrote Protocol, Co-primary Collaborator	MGH
Jeremy Heit	Neurovascular Physician, Co-primary Collaborator	Stanford
Kevin Kallmes	Project oversight	NK
Kristen Hutchison	Will write manuscript and updated protocol	SME/NK
John Pederson	Contributed to protocol writing, performed statistical analysis, performed risk of bias/qualitative appraisal of evidence, and manuscript writing	SME/NK
Hassan Kobeissi	Collaborator	University of Michigan Medical School
Daniel Heiferman	Collaborator	Semmes-Murphey
Nicole Hardy	Project manager	NK

Funding Sources/Sponsors:

None that I am aware of.

Conflicts of Interest:

Members of the NK team were involved in this project that is in part evaluating the effectiveness of NK software. Our collaborators for this project are from the Stanford University Neurosurgery department — And the additional organizations that Daniel and Hassan are a part of**

Final Notes on the QC for this nest: 2/14/22

1. There is a gap-tooth associated with "Advanced imaging required for admission to trial?", because some of the trials didn't mention what type of imaging these used here.

2. Campbell, 2015, and Saver, 2015, have pretty consistent outlying data in relation to the other articles.

4. Distal emboli is an outlier for ivTPA/Medical Therapy intervention group, in comparison to other arms. But, we did break this tag into "distal emboli" and "ENT", so this note may be irrelevant.

5. There is a possible sub-population bias for the Khoury, 2017 article, because of the small inclusion/exclusion criterion.

John Pederson12/29/21, 5:09 PM

@Gautam Adusumilli which outcome would be

i

You will be able to see any previous searches performed

4. Select Search Engine

From the drop-down, select the Search Engine or database you would like to set up automatic API-based search on. Nested Knowledge supports PubMed, EuropePMC, and ClinicalTrials.gov.

https://wiki.nested-knowledge.com/

Printed on 2024/05/19 12:59

For any other search engine or database, you will need to import using [File Import](#) rather than running directly via API.

Each of these search engines use Boolean queries, so you can use AND, OR, NOT, and parentheses to connect different terms. For specific guidance on constructing queries, use the search-engine-specific-links here:

- [PubMed](#)
- [EuropePMC](#)
- [ClinicalTrials.gov](#)
- [Directory of Open Access Journals \(DOAJ\)](#)

5. Type in your Search Terms

Type your search terms into the “Query” box, type the same as you would in a search engine. **Use parentheses and terms such as AND, OR, NOT, in between your phrases. Click [HERE](#) for tips on how to create a great literature search.**

5. Select Search Engine & Schedule

Below the “Query” box, there is a drop-down list of search engines you can choose from. A second drop-down list is below, where you can choose to run the search only once or have it repeatedly run over time (ex: monthly, etc).

The screenshot displays the 'Literature Search: Acute Ischemic Stroke - RCTs' interface. A 'Create New Search' dialog box is open, allowing users to configure a new search. The dialog includes the following fields:

- Query***: A text area containing the search query: `(solitaire OR travo OR penumbra) AND (RCT OR "Randomized controlled trial")`. A red box highlights the word 'travo' which is crossed out and replaced with 'travels'.
- Search Engine***: A dropdown menu currently set to 'PubMed'.
- Note**: A text area for additional notes, currently empty.
- Schedule***: A dropdown menu currently set to 'Monthly'.

At the bottom of the dialog, there are 'Cancel' and 'Add' buttons. A status message indicates: 'This search will import 168 results.'

The background interface shows a sidebar with navigation options like 'Nest Home', 'Literature Search', 'Dual Screening', 'Tagging', 'Extraction', 'Risk of Bias', 'Study Inspector', and 'Synthesis'. The main area displays a table of existing searches with columns for Term, Search Engine, Schedule, Search Now, and History and Details.

6. Run Your Search

Once you've completed entering all terms, chosen the search engine and schedule of running the search. Click “Add” in the bottom right corner of the window.

7. New Studies will be Added to Screening

Once you add the new search, it will run and be listed at the top of your searches. The added studies will be ready to be screened in the Nest menu.

Next Steps

When you have confirmed that your final search(es) represent all records you would like to review in your nest, proceed to [Screening](#).

Useful Information

- **Viewing Search History**
 - To see the full term that was searched on the search engine and the dates on which it was searched, as well as the number of studies retrieved, you can hover over a study and click “Full History”.

Literature Search: COVID-19 RCTs for Antivirals - Lauren

5 / 5

Below are all searches in the nest. Searches may be executed via API (depending on search engine) or RIS file upload.

Add Search

Term	Search Engine	Schedule	Search Now	History and Details	Delete
covid-19 and antivirals and randomized controlled trials NOT ...	pubmed	Month	Run File	Full History	
covid-19 and antivirals and randomized controlled trials NOT ...	pubmed	Month	Last Run: 2021-04-15	Method: api Results: 224	
COVID-19 AND RCTs AND antivirals AND cohort study	pubmed	Month	Last Run: 2021-04-14	Method: api Results: 15	
COVID-19 AND RCTs AND antivirals NOT systematic review ...	pubmed	Month	Last Run: 2021-04-14	Method: api Results: 16	
COVID-19 AND RCTs AND antivirals	pubmed	Month	Last Run: 2021-04-14	Method: api Results: 49	

- **Deletion Warning**
 - If you delete a search, you will delete all studies found through that search term, all screening, tagging, extraction data, and any live/updatable export from those studies. Do not delete a search unless you want to remove all results related to it.
- **No Editing**
 - To ensure a consistent search record, you cannot edit a search term once executed. You can delete it (see above warning) and replace it, but you cannot edit a search once it is added.
