

Import RIS Files

RIS files are generated to load studies from search databases other than PubMed into NK. After performing a search on SCOPUS, Web of Science, Embase, etc. there is an option to export the search as a RIS (or nBIB) file. It **must be exported as an RIS or nBIB file** because that is the format needed for NK to read it correctly.

Make sure you export all the studies in the search. Specific tips on search databases are below.

You may consider [downloading Zotero](#) if you are finding it difficult to export RIS files from EndNote.

Generate the RIS File from the Search Engine

Embase

- Export all studies as Format: RIS and Field: "Citation"
- Unselect "Link to External Resolver" and "URL"

Scopus

- Leave all preselected items on "Citation Format" alone
- Export as "RIS Format"

Other Search Engine

- Follow the steps in any Search Engine that supports RIS Export
- When in doubt, select the file type that is 'for Reference Managers' or similar

Go to Literature Search

Log into the specific nest on NK. Go to Literature Search, this is where you normally search automatically on PubMed through NK.

Upload RIS File

- From the Literature Search page, select "Add Search"
- In the modal that appears, select "File Import"

The screenshot shows the 'Create New Search' modal in the 'Literature Search: Acute Ischemic Stroke - RCTs' interface. The modal is titled 'Create New Search' and has two tabs: 'Automatic' and 'File Import'. The 'File Import' tab is selected. The modal contains the following fields:

- Query***: A text input field with the placeholder 'Enter query'. A red arrow points to this field.
- Import Search***: A button labeled 'Upload a File'.
- Search Engine***: A dropdown menu with 'PubMed' selected. A red arrow points to this dropdown.
- Note**: A text input field with the placeholder 'Enter your note'.
- Date of Search***: A date picker showing '05/20/2022'. A red arrow points to this field.

At the bottom right of the modal is an 'Add' button. The background shows the 'Literature Search' dashboard with various filters and a table of searches.

- If your RIS File resulted from a search on an index, enter the full query you used and identify the Search Engine/Index in the drop-down.
- If the Search Engine of interest is not present, select **“Other”**. A text box will appear below this menu; enter the search engine name there.
- Enter the date of your search

Why do you need to add this information?

We use the Query, Search Engine, and Date as part of the record-keeping on where the records you screened came from. You will be able to access this information in the “History” tab on any study, and it also impacts your PRISMA Chart.

- When done, click “Add” in the bottom right of the modal.

Format for RIS file

If the RIS file does not load any of the studies, check to make sure the RIS file is formatted correctly. Change the file to a .txt file and look at the format. It should be in the format below; if not, edit the file before uploading or contact support.

```

AU - BACKGROUND until recently, the benefits of endovascular treatment in stroke were not proven. care trials have been designed to simultaneously offer yet-to-be validated interventions
METHODS The study was offered to all patients considered for endovascular management of acute ischemic stroke in one canadian hospital. Inclusion criteria were broad: onset of symptoms<24h
RESULTS Seventy-seven patients were recruited in 19 months (March 2013-October 2014) at a single center. Randomized allocation was interrupted when other trials showed the benefits of endo
CONCLUSION A care trial was implemented to offer verifiable care to acute stroke patients. This approach offers a promising means to manage clinical dilemmas and guide uncertain practices.

Updating

There is **no automatic updating of RIS import**. To update your RIS file, we recommend that you do not delete or alter your past import; add an entirely new search term and file; our system will automatically de-duplicate the imported results.

Deleting a RIS File

- In the Literature Search page, find the line representing your RIS Import by identifying its Term/Query, Search Engine, and/or Date.
- In the far right column, click the red trash can icon.
- A warning will appear; if you are certain that you want to delete all records from your RIS Import, and any history of its presence in the nest, click "Proceed."

Deletion Warning:

If you delete a search or a RIS file, it will remove all studies and associated screening, tagging, and extraction data from the nest. **This action cannot be reversed!**

Using nBIB Files instead of RIS Files

Where available, nBIB files can be exported from your database of interest and uploaded into the Literature Search module.

Downloading an nBIB File from PubMed

First, run your search on [PubMed](#).

Then, in the “Send To:” menu at the top of the search results page (see image), select Send To: **Citation Manager**.

The screenshot shows the PubMed.gov search results page for the query "nested knowledge". The search bar at the top contains the query, and the "Send to" button is highlighted with a red box. Below the search bar, there are buttons for "Save", "Email", and "Send to". The "Send to" button is highlighted with a red box. The search results are displayed in a list format, with the first result being "Mechanical Thrombectomy With and Without Intravenous Tissue Plasminogen Activator for Acute Ischemic Stroke: A Systematic Review and Meta-Analysis Using Nested Knowledge". The results are sorted by "Best match" and displayed on page 1 of 4. On the left side, there is a "RESULTS BY YEAR" bar chart showing a significant increase in results from 2016 to 2022. Below the chart, there is a "TEXT AVAILABILITY" section with checkboxes for "Abstract", "Free full text", and "Full text".

Next, select the records you want to export. The “Send To:” menu automatically selects “all results on this page,” so if you want to export all search results, **ensure that you select “all results”!**

The screenshot shows the "Send to" menu that appears when the "Send to" button is clicked. The menu is titled "Create a file for external citation management software". It contains a "Selection:" dropdown menu with the option "All results on this page" selected and highlighted with a red box. To the right of the dropdown, there is a red text warning: "Change to 'All Results' if those are the citations you want!". At the bottom of the menu, there are two buttons: "Create file" and "Cancel".

Click Create file.

Your web browser will prompt you to save the file on your computer. Import this saved file into your citation management program, and then proceed to uploading your file into your nest.

Uploading, Updating, and Deleting nBIB Files

The steps to upload (and delete) an nBIB file are the same as those for a RIS file ([above](#)).

Similarly, there is **no automatic updating of nBIB files**. In order to update an nBIB file, you must rerun and re-export the nBIB file from the database.
