

# Export RIS Files

## How to Export a RIS File

RIS Export is meant to enable you to create a bibliographic/library file containing the metadata for records from the nest. The resulting download should be compatible with conventional reference managers (e.g. Zotero).

### 1. Go to Study Inspector

To enable you to export any subset of studies' bibliographic information, we have placed the Download RIS Export function in [Study Inspector](#).

The screenshot displays the NESTED KNOWLEDGE web application interface. The top navigation bar includes links for 'About', 'Docs', 'Support', 'AutoLit', and a user profile for 'Nicole'. The main content area is titled 'Home: Thrombectomy alone vs. Thrombectomy plus thrombolysis'. On the left sidebar, the 'Study Inspector' option is highlighted with a red box. The main panel shows the 'Protocol' section with a table of contents and details for 'Objective', 'Scope', 'Population', 'Primary Outcomes', and 'Secondary Outcomes'. The 'Objective' section states: 'Determine the added benefit of Intravenous Thrombolysis in patients undergoing Mechanical Thrombectomy for Acute Ischemic Stroke'. The 'Scope' section describes clinical trials, retrospective studies, or previous meta-analyses designed at evaluating clinical outcomes (functional and imaging) in stroke patients undergoing mechanical thrombectomy for acute ischemic stroke. The 'Population' section states: 'Patients presenting with acute large artery ischemic stroke within 12 hours of symptom onset'. The 'Primary Outcomes' section lists: 'Rate of TIC13 recanalization' and 'First Pass Effect (Single Pass Reperfusion)'. The 'Secondary Outcomes' section lists: 'Functional independence (mRS 0-2) at 90 days', 'Rate of early neurological improvement (NIHSS improvement of >8 or NIHSS 0/1 at 24 hours)', 'Ordinal mRS at 90 days', 'All-cause mortality', 'Occurrence of symptomatic ICH', 'Occurrence of distal emboli post-procedure', and 'Rate of TIC13h3 recanalization'. On the right sidebar, there is a 'Notes' section with a note from Kevin Kallmes dated 10/25/22, 6:22 PM, mentioning @Hassan Kobeissi and an admin role. Below the notes is a 'Comment' section with a text input field and a 'Comment' button.

### 2. Filter to the desired studies

Apply the filters that narrow the set of studies to those you want to export. Note that, without any filters, you will export the bibliographic information for **all studies, including excluded studies**.

Once you have selected "Download," a modal will open, in which RIS Export should already be automatically selected. Select the "Download" option in the bottom right of the modal, and your RIS File should begin downloading!
