Planning a Systematic Review

- Is Your Systematic Review Feasible?
- Protocol Writing and Registration

Consider Establishing a Study Team

- Identify a team lead or project manager to organize project tasks, and ensure that the study protocol is followed.
- Identify "independent reviewers" or team members to verify data, adjudicate study inclusion differences, and identify those that will participate in each step of the review process.

Key Planning Questions

- How to determine if the project is viable or useful to the literature
- How to know whether you need to write and register a protocol for your systematic review.
