Penetration Testing

Nested Knowledge will undergo penetration testing of its web application on an **annual basis,** unless this schedule is required to be revised by Nested Knowledge. An external security firm will test the web application to identify vulnerabilities. During the testing period, no software releases will be pushed, except releases with important bug fixes. Any vulnerabilities detected will be remediated promptly by the Nested Knowledge development team.

Each penetration test will follow the steps:

1. Reconnaissance: gathering information before an attack
2. Enumeration: finding attack vectors
3. Exploitation: verifying security weakness
4. Documentation: Recording results

Testing History

The last penetration test was completed by a third-party vendor on May 5th, 2023.

Revision History

Author	Date of Revision/Review	Comments/Description
K. Cowie	05/04/2023	Updated
K. Kallmes	04/10/2023	Approved
