

Supported Platforms

Desktop

AutoLit and Synthesis are developed and tested on Chrome, FireFox, and Edge browsers. Any display or functional issues in these browsers can be [reported](#) (we really appreciate it!). Other common browsers, such as Safari, while not officially supported, are expected to function.

Internet Explorer, which reached [the end of its lifecycle in Summer 2022](#), is not a supported browser, and Nested Knowledge may have display and functional problems on it. It is recommended to avoid IE.

Mobile

Synthesis

All Synthesis pages are designed and tested for responsiveness on mobile web browsers.

AutoLit

We recommend accessing AutoLit from desktop devices with at least 800px screen width.

A version of mobile AutoLit was supported from mid-2021 to late-2023. It was deprecated due to poor adoption, limited functionality, and reduction of development pace on the core desktop application.
